Predictive Services Discussion: The large ridge of high pressure centered over the West will strengthen, allowing for temperatures to return to being about 10-15 degrees above normal. Monsoonal moisture over southern California, Arizona and New Mexico will allow for the redevelopment of storms in the afternoon. The remainder of the West should be dry. Expect very low afternoon humidity levels and poor overnight recoveries again. Breezy conditions are expected across the Great Lakes region, as a cold front quickly moves east toward New England. The remnants of Harvey will produce very wet conditions across the mid-South.

TRANSFER OF COMMAND

Operational Engagement Category

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents with potential during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES—Lookout, Communications, Escape Routes, and Safety Zones.

Factors for increased risks to fireline personnel during transition periods include:

- No, or poor, briefing of incoming personnel
- Lack of fire weather and behavior information, both forecast and observed
- Communications; face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
- Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources.
- Location of safety zones and escape routes may not be known and communicated to all resources.
- Not all Resources know who is in command.

Mitigation actions to take:

- Lookouts: Post and maintain your own lookouts.
- Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor.
- Escape routes and safety zones: Identify escape routes and assure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them.
- Transition at the morning briefing
- Utilize the Incident Response Pocket Guide transition checklist
